

1. PROJECT & TEAM INFORMATION

- **Project Title:** ComicCraft - AI Comic Story Creator using Gemini Models
- **Team ID:** SWTID-2026-7649
- **Team Leader:** N.Sopya

2. BRAINSTORMING SESSION OVERVIEW The goal of the brainstorming session was to conceptualize a tool that democratizes comic book creation. Several approaches were discussed to solve the problem of visual storytelling for non-artists, evaluating the feasibility, technical complexity, and user experience of each idea.

3. IDEAS GENERATED & EVALUATED

- **Idea A: Manual Comic Builder.** A drag-and-drop builder where users upload their own images and type text. (Rejected: Requires too much manual effort and doesn't solve the image generation problem).
- **Idea B: Text-Only AI Story Generator.** An AI that just gives the script and scene descriptions. (Rejected: Fails to provide visual output, which is the core problem).
- **Idea C: End-to-End AI Pipeline.** An automated system using Large Language Models (LLMs) for story generation and Diffusion models for image generation, culminating in a PDF export. (Selected: Highly scalable, completely automated, and solves the core user problem perfectly).

4. IDEA PRIORITIZATION (MoSCoW MATRIX) To ensure a structured development phase, the features for Idea C were prioritized using the MoSCoW method:

- **MUST HAVE (Critical for MVP):**
 - User input form (Prompt, Character, Setting).
 - Integration with Google Gemini Flash/Pro for story outlines and dialogues.
 - Integration with Hugging Face Stable Diffusion for image generation.

- Automated 2-panel to 5-panel comic layout generation.
- PDF Export functionality using FPDF.
- **SHOULD HAVE (Important but not critical):**
 - Customizable Art Styles (Anime, Realistic, Comic Book).
 - Customizable Story Tones (Dramatic, Funny).
 - User-friendly HTML/CSS interface with a Comic Preview page.
- **COULD HAVE (Nice to have for future):**
 - Multi-page, 10+ panel comic generation.
 - User accounts and database storage (SQLite) to save past comics.
 - Social media sharing buttons.
- **WON'T HAVE (Out of scope for now):**
 - Manual image editing tools (brush, crop) within the web application.
 - Video or animated comic generation.
