

1. PROJECT & TEAM INFORMATION

- **Project Title:** ComicCraft - AI Comic Story Creator using Gemini Models
- **Team ID:** SWTID-2026-7649
- **Team Leader:** N.Sopya

2. TARGET AUDIENCE & PERSONA

- **Target Audience:** Amateur Writers, Creative Enthusiasts, Educators, and Children.
- **User Persona:** "Creative Karthik" - A 20-year-old college student who loves writing fictional stories but doesn't know how to draw. He wants to share his stories visually on social media but gets overwhelmed by complex design tools and cannot afford to hire an illustrator.

3. EMPATHY MAP ANALYSIS

What the User SAYS:

- "I have an amazing story idea, but I can't draw the characters."
- "I wish there was a magic button to turn my script into a comic."
- "Professional software like Photoshop is too hard to learn for a beginner."

What the User THINKS:

- "Will the AI understand the mood and tone of my story?"
- "I want my characters to look consistent across all panels."
- "How can I easily combine the images and text into one readable file?"

What the User DOES:

- Writes stories in notebooks or simple text editors.
- Tries to use free text-to-image AI tools but struggles to stitch the results together.
- Spends hours looking for free illustrators online or using basic clip-art.

What the User FEELS:

- **Frustrated:** Because his creative vision is blocked by a lack of artistic skills.
- **Excited:** By the possibility of AI helping him visualize his world.
- **Impatient:** Wants a quick, automated result without spending days editing.

4. PAINS AND GAINS

- **Pains:** High cost of illustration, complex comic layout formatting, inconsistent AI images, and excessive time required to manually assemble generated images into a readable document.
- **Gains:** Instant visualization of ideas, downloadable PDF format for easy sharing, simple user-friendly interface requiring zero technical knowledge.
