

1. PROJECT OVERVIEW

- **Project Title:** ComicCraft - AI Comic Story Creator using Gemini Models

2. INTRODUCTION TO DEMO PLANNING A well-structured demonstration video is crucial for evaluators to understand the value and technical execution of ComicCraft. The demo planning phase outlines the exact script, screen flow, and timing for the recorded video presentation.

3. DEMO VIDEO STRUCTURE (TIMELINE)

- **Part 1: Introduction**
 - Introduce the project name, domain, and team members. Briefly explain the core problem (the "Visualization Barrier" for non-artists) and how ComicCraft solves it using Generative AI.
- **Part 2: Architecture & Code Walkthrough**
 - Showcase the project directory structure (`app`, `templates`, `static`). Highlight the FastAPI backend routing (`routes.py`), dual-engine AI generators, and PDF compilation logic.
- **Part 3: Live Application Demonstration**
 - Open the browser at `127.0.0.1:8000`. Fill out the user input form with a custom prompt and character name. Submit the form to trigger the AI generation pipeline (utilizing demo/fallback mode to ensure smooth video rendering during network restrictions).
- **Part 4: Output & PDF Export Review**
 - Scroll through the interactive comic preview page showcasing panels, titles, and stories. Click the PDF download button and open the exported file to prove end-to-end functionality.
- **Part 5: Conclusion**
 - Summarize project achievements, technical learnings, and potential future enhancements.
